

Business Problem & Client Requirements (BRD / SOW)

The client provided a **Business Requirement Document (BRD)** (also referred to as a Statement of Work / SOW) to analyze nationwide Swiggy transactional data from January to August 2025. The client's problem statement is divided into two primary parts:

1. Executive KPI Requirements (High-Level Business Health)

The client requires an immediate, high-level summary of business performance so stakeholders can assess overall platform health, growth direction, and profitability:

- **Total Sales:** Track the overall revenue generated in Rupees across all customer orders.
 - **Average Rating:** Measure customer satisfaction levels across restaurants to gauge service quality.
 - **Average Order Value (AOV):** Calculate the average revenue generated per individual order.
 - **Rating Count:** Track the total volume of customer reviews submitted to evaluate platform engagement.
 - **Total Orders:** Count the total volume of food orders received on the platform.
-

2. Granular Deep-Dive Requirements (Operational Root-Cause Analysis)

To address specific operational and strategy challenges, the client required deeper dimensional and time-series analyses:

- **Monthly Sales Trend:** Track month-over-month revenue fluctuations to help operations manage courier manpower during busy months and advise restaurants to offer promotional discounts during slow months.
- **Daily Sales Trend:** Analyze revenue variations across days of the week (Sunday to Saturday) to identify peak demand days.
- **Weekly Sales Trend:** Trace weekly sales fluctuations to highlight peak operational periods throughout the year.
- **Sales by Food Type:** Compare revenue contribution between **Vegetarian (Veg)** and **Non-Vegetarian (Non-Veg)** menu items.
- **Sales by State:** Visualize regional revenue distribution across Indian states using a geographical map chart.

- **Quarterly Performance Summary:** Build a consolidated grid view comparing **Sales, Ratings, and Orders** across quarters.
- **Top 5 Cities by Sales:** Identify the top 5 urban cities contributing the highest revenue to the platform.
